

# Care instructions

## For fabrics with a water-repellent finish

2025

**The finish repels only water-based liquids such as coffee, tea, wine and soft drinks. It does not repel oil or oil-based stains such as mayonnaise and ketchup.**

- Spills should be removed immediately with a clean, absorbent cloth.
- To best preserve the fabric's hydrophobic properties, wash at 30°C, then tumble dry or iron to reactivate the wax-based finish with heat.
- Do not dry clean. Dry cleaning will diminish the effectiveness of the finish.
- The finish has been tested through numerous washing cycles at 30°C while maintaining a spray test rating of 4. Frequent or higher-temperature washing will gradually reduce the finish's effectiveness. We cannot guarantee an exact number of wash cycles after which the water-repellent effect may diminish.
- Washing at higher temperatures up to 70°C is possible, but will gradually reduce the finish's effectiveness.
- Avoid bleach, solvents and alcohol, as these can damage the fabric's finish.
